DETAILED ACTION

This Office Action is in response to the amendment filed February 1, 2005 for the above identified patent application.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-4, 7, 9-12, and 14 are rejected under 35 U.S.C. 102(e) as being anticipated by Arai et al. (US Patent 6,527,642).

Arai et al. illustrates an electric motor, a worm shaft having a worm, a steering shaft having a worm gear, a biasing member for biasing the worm towards the worm gear, a concave member accepting the bearing, a housing for housing the bearing and the concave member, wherein the biasing member is a coil spring.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3682

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 1-4, 7, 9-12, and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kamimura (JP 60-191758) in view of Eda et al. (US Patent 6,044,723).

The prior art to Kamimura teaches a worm gear arrangement having the claimed biasing device for biasing a worm into engagement with a worm gear. Kamimura does not appear to disclose the worm gear arrangement being used in combination with a power steering device, however it was known in the art to use worm gears for assisting the steering of a vehicle. For example, Eda et al. discloses a power assist device comprising a worm gear arrangement, wherein the worm gear arrangement includes a biasing device for biasing a worm into engagement with a worm gear. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the worm gear arrangement of Kamimura in combination with a power steering device, as taught by Eda et al., motivation being to provide a means for adjusting the biasing force and/or the engagement of the worm gears.

Referring to Kamimura, it is noted that the concave member is formed with a bore for accepting the bearing. In the event applicant further defines the claims so as to preclude the illustrated bore of Kamimura, the claims will be rejected because forming the bore as a recessed portion, such as a semi-circular portion, would have been obvious to one in the art in order to reduce the material needed in forming the concave member.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William C. Joyce whose telephone number is (571) 272-7107. The examiner can normally be reached on Monday - Thursday 7:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Bucci can be reached on (571) 272-7099. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
